

Customer Retention Playbook

Approved synthetic playbook for grounded AVO recommendations.

1. Evidence before intervention

Review transactions, valid message IDs, complaints, consent, and prior actions. If evidence is insufficient, say: Insufficient evidence - staff review required.

2. Service recovery first

Resolve or clearly progress service and delivery complaints before suggesting a promotion. Promotional messages must not distract from a missed promise.

3. Escalation guide

Critical risk, cancellation language, severe complaints, or two missed commitments require manager review within 24 hours. High risk requires review within 48 hours.

4. Cross-sell guide

Cross-sell only when a customer expresses a relevant need, the approved catalogue supports it, availability is verified, and consent permits the selected channel.

5. Outcome recording

Record executor, execution time, response, outcome, and later purchases. Recalculate risk deterministically; AVO cannot override a score.
